

**IN THE ABSTRACT:**

Please amend the Abstract on page 28, lines 5-8 as follows:

~~A medical device is described which has on a surface thereof a bio-compatible coating. This bio-compatible coating is formed from a composition which includes an aqueous emulsion or dispersion of a polycarbonate-polyurethane composition containing one or more internal emulsifying agents.~~

A coating for a medical device is described which enhances the bio-activity of the surface of a medical device, rendering the surface substantially bio-compatible. The bio compatible coating is formed from a composition which includes an aqueous emulsion or dispersion of a polycarbonate-polyurethane composition and an excess of polyfunctional cross-linking agent.
